WORK EXPERIENCE

Kotak Mahindra **April 2026 – Current**
SDE-2 *Bangalore, India*

Digital Execution Platform

- Built and co-own Kotak's e-stamping and e-signing platform, the mandatory integration for loan sanctioning bank-wide, cutting loan sanctioning turnaround from **3–4 weeks** to under **2 hours**.
- Scaled the platform to **100K+ deals** and onboarded **5+ lending teams**, serving as the single path for digital execution of loan documents across the bank.
- Work directly with bank managers to triage production issues and convert recurring pain points into product features, Ex: turned complaints about signing volume into a document-merging capability that reduced signatures per loan by many fold.

CRED **Sept 2022 – Dec 2025**
SDE-2 *Bangalore, India*

Pricing, Deals & Campaign Systems

- **Led team of 3 engineers** in end-to-end **re-architecture of pricing platform** handling peak of **8K RPS**, mentored **2 junior engineers** on system design and scalable architectures
- Designed and implemented fault-tolerant microservices architecture decomposing monolithic system into **Micronaut** (Java) Pricing Store and **Golang** (Gin) Cataloging Service, Reducing pricing errors by **50%, leakage in crores**, and campaign bandwidth usage by **40%**
- Migrated and re-priced **90K+ SKUs** from legacy centralised system with **zero downtime** using phased rollout and rollback mechanisms
- Engineered **configuration-driven Golang deal engine** supporting **10K+ concurrent active campaigns** at peak with **high availability** guarantees, handling **25K to 50K SKUs per ingestion** with safeguards against price leakage and data corruption
- Implemented **Kafka Streams pipelines** using **1-minute windowed aggregations** processing **300 events per minute**, Reducing Elasticsearch node count by **44%** and infrastructure costs by **45%** (**Rs. 3L per month savings**)

Growth, Gifting & User Resurrection

- Designed and built **fault-tolerant dormant user engagement platform** in **Java (Spring Boot)** handling **25K RPS peak traffic** with **high availability**
- Implemented **S2S and QR-based merchant redemption flows** with **idempotent APIs** and **retry-safe workflows**, Executed large-scale campaigns reactivating **100K dormant users** contributing **5 to 7%** of total reactivations, **20% reactivation rate** via non-intent channels
- Built **high-throughput gift distribution system** preventing reward leakage under retry-heavy conditions with comprehensive monitoring and alerts for tracking reward issuance

Inventory, Catalog & Post-Order Systems

- **Led redesign** of inventory synchronisation across **8 Java backend services** handling **300 updates per minute**, eliminating race conditions using RDBMS transactions with **row-level locking** reducing failures by **95%**
- **Architected catalog restructuring** with **4-level hierarchy** in collaboration with product and onboarding teams, Redesigned onboarding workflows reducing onboarding time by **70%** and unlocking **5% incremental GMV**
- Designed **concurrency-safe return and return-reason workflows** across distributed services with **idempotent state transitions**, reducing customer escalations by **66%**

Wealth Management & Payments Platform

– **Architected** generic **BFF API and batching framework** for app-facing microservice powering **40% of app screens including landing**, reduced **p95 latency by 40%** (**450ms to 270ms**) by minimising network calls, and with tag based batching
– Developed **real-time and daily batch computation engine** processing user transactions to compute portfolio KPIs (returns, allocation drift, and SIP performance metrics etc) at scale

Reliability & Infrastructure

– Co-designed org-level Micronaut (Java) Tier-0 library used across **15 services**, and Maintained **zero-downtime database upgrade framework** reducing maintenance downtime from **45 to 60 minutes to 10 to 15 minutes**

Innovaccer **Jan 2022 – Sept 2022**
Software Engineer Intern to FTE *Noida, India*

– Developed **end-to-end job scheduler service** supporting **Cron and ad-hoc executions** with **durability guarantees**
– Implemented execution tracking and **fault-tolerant retry semantics** for reliable job processing
– Built **backup and restoration system** with **snapshot-based rollback** to support safe schema and data migrations

PROJECTS

verdikt *(in progress) | Configurable LLM-as-judge library, on PyPI as* `pyverdikt` **Link**

– **9 judge types** (pointwise, pairwise w/ position-swap, rubric, classifier, 3 RAG judges, agent trajectory); **broadcast-to-N-models** with 5 consensus strategies and a **judge-of-judges** meta-judge that weighs reasoning, not just scores
– **Reliability layer**: retries w/ backoff, model fallbacks, response caching, multi-sample voting, injection-resistant prompting, per-verdict cost/token/latency tracking; **gated multi-step pipelines** (early-exit, conditional steps); 65 tests, CI

Omniscient *(in progress) | Permission-aware enterprise RAG assistant* **Link**

– **Permission-aware retrieval**: source ACLs + **sensitivity labels** enforced in-query before ranking, so restricted data never reaches the LLM
– **Hybrid retrieval + reranking**, cited answers with abstention, **MCP-gated actions** on user OAuth, full query audit

TECHNICAL SKILLS

Languages: Java, Python, Golang

Backend Frameworks: Spring Boot, Micronaut, Dropwizard, Gin, Temporal, FastAPI

AI/LLM: RAG, AI Agents, LLM-as-judge Evals, Agent Reliability, LLM Observability, pgvector

Datastores: MySQL, Redis, Elasticsearch, DynamoDB

Streaming & Messaging: Kafka, Kafka Streams, SQS

Observability: Datadog, Grafana, Loki, Coralogix, Cloudwatch

Infrastructure & Cloud: AWS, Docker, Kubernetes, CI/CD (Jenkins)

ACHIEVEMENTS

- Delivered **20 production-grade Datadog dashboards and alerts**, applying Apdex-based tuning to reduce alert false positives by **83%**
- **Global Rank 74** in CodeChef August Lunchtime (Division 2)

EDUCATION

IIIT Sricity **2022**
B.Tech in Computer Science — CGPA 7.67 / 10 *Andhra Pradesh*

JNV, Khairabad (Sitapur) **2017**
Senior Secondary (Class XII), PCM — 94% *Uttar Pradesh*
